PURPOSE: To prepare the title dispersant useful for the emulsion polymerization of an unsaturated monomer mixture containing N-alkylol(meth)acrylamide by adding an alkali to a specific copolymer to make it water-soluble.
CONSTITUTION: An alkali (e.g. NaOH) is added to a copolymer comprising 1-40wt.% monomer units derived from a monomer selected from the group consisting of (meth)acrylamide, an N-alkyl derivative of (meth)acrylamide, and an N-alkylol derivative of (meth)acrylamide, 3-40wt.% monomer units derived from a 3-5C ethylenically unsaturated carboxylic acid, 96-50wt.% monomer units derived from a monomer selected from the group consisting of a 1-9C alkyl (meth) acrylate, a vinyl aromatic compound, a vinyl halide, (meth) acrylonitrile, and a vinyl saturated carboxylate, and 0-10wt.% other monomer units to thereby make the copolymer water-soluble, thus giving the title dispersant.; In the presence of the dispersant, an unsaturated monomer mixture containing 0.5-80wt.% N-alkylol(meth) acrylamide is emulsion-polymerized.
